AI TRADING LAB · DATA ENGINE V4.4.0 · PAPER ONLY

iOS & Android Setup Guide

Android ke liye signed APK aur iPhone ke liye Safari PWA — poora installation guide. Download links, invite code, same Wi-Fi setup, Cloudflare tunnel aur native Xcode build — sab step-by-step.

AI Trading Lab — Data Engine

ALL-BINANCE UNIVERSE · SHAAKUNI SUITE · PDF PACK S1–S9 · AI TRAINER

NOVEMBER 2026 · VERSION 36 · GITHUB RELEASE V4.4.0

1. Overview — Is Guide Me Kya Hai

Ye guide AI Trading Lab Data Engine **v4.4.0 (versionCode 36)** ko Android phone aur iPhone par install karne ka poora tareeqa batati hai. Android ke liye ek signed APK file hai jo direct download hoti hai, aur iPhone ke liye Safari PWA (Progressive Web App) ka rasta hai kyunki Apple APK files install hone nahi deta. Dono tareeqon ke baad aapke paas wahi dashboard hoga: saare Binance coins, Shaakuni indicators aur strategies, PDF Strategy Pack S1–S9, AI Trainer, aur paper-trading engine.

Ek baar yaad rahe: ye system **PAPER ONLY** hai. Koi real order kisi exchange par nahi jata, na koi API key trading ke liye mangi jati hai. Ye ek simulation aur learning tool hai jahan aap strategies test karte hain, AI trainer se weights banwate hain, aur risk 1% ke rules par trades dekhte hain. Aisi koi setting nahi jis se real paisa lag jaye — is liye isay aap be-fikar hokar apne phone par rakh sakte hain.

Item	Value
Version	v4.4.0 — versionCode 36 (NOV 2026)
Android APK size	~254 KB — signed (CN=AI Trading Lab), zipaligned
Android requirement	Android 7.0+ (minSdk 24)
iPhone requirement	iOS 13+ · Safari · koi bhi modern iPhone
Invite / login code	M2991474 (pehle se active hai)
Markets	Saare Binance spot USDT coins (300+, auto-sync har 6 ghante)
Mode	PAPER ONLY — koi real order path nahi

Table 1 — Release ke bunyadi facts

2. Download Links (Permanent)

Neeche ke links GitHub Release par host hain, is liye ye permanent hain aur kabhi expire nahi honge. Android link ko seedha phone ke browser (Chrome) me kholen — download khud shuru ho jayega. Agar phone me GitHub block ho to kisi bhi computer par download kar ke USB se APK transfer kar sakte hain. SHA256 check ke liye neeche wali value use karen taake file corrupt na ho.

Kya	Link (dono hisse mila kar ek URL hai)
Android APK (direct download)	`github.com/muhammadasterschool-sketch/ai-trading-lab-data-engine/releases/download/v4.4.0/AI-Trading-Lab-v4.4.0-all-binance-ai.apk`
Release page (notes + files)	`github.com/muhammadasterschool-sketch/ai-trading-lab-data-engine/releases/tag/v4.4.0`
Poora source code	`github.com/muhammadasterschool-sketch/ai-trading-lab-data-engine`
APK SHA256	`089831c2 01532fd6 9de2a39b 6dbf3942 bc29359d 469bd93c be0adf1a 04d75b10`

Table 2 — Official links (GitHub Release v4.4.0)

3. Android Install — 5 Steps

Android par install sab se aasan hai kyunki APK humne sign ki hui hai aur purani version (v3.x / v4.0.x) ke upar seedha update ho jati hai — aapka purana data, settings aur invite code sab reh jate hain kyunki signing key wahi hai. Bas ye 5 steps pore karen:

Step 1. Phone me Chrome kholen aur Table 2 wala **Android APK (direct download)** link paste karen. Download turant shuru ho jayega (~254 KB).

Step 2. Download complete hone par notification par tap karen. Android bolega "unknown apps install nahi kar sakta" — **Settings** par jayen aur **"Allow from this source"** on kar den (sirf Chrome ke liye ek dafa permission hai).

Step 3. Wapas aayen aur **Install** dabayen. Purana version installed ho to Android khud update kar dega — data delete nahi hoga.

Step 4. App kholen. Pehli dafa invite code mangega: **M2991474** likhen aur Continue dabayen. Code pehle se active hai.

Step 5. Home par **BINANCE MODE** banner aur **v4.4.0** version dekh len — confirm ho gaya ke naya version chal raha hai. Chart me kisi bhi coin ka chip tap kar ke candles + indicator overlay (PDH/PDL, Order Blocks, FVG) check karen.

Agar "App not installed" error aaye to pehle purana AI Trading Lab app uninstall kar ke dobara try karen — ye tabhi hota hai jab koi alag-signed build pehle se para ho. Install ke baad app ka size chhota lagta hai kyunki engine aur dashboard sab APK ke andar hi hain; internet sirf Binance candle data ke liye use hota hai.

4. iPhone (iOS) Install — Safari PWA (Recommended)

Important: APK file iPhone par install NAHI hoti — Apple sirf App Store se apps leta hai. Is ka hal PWA hai: Safari me engine ka web dashboard kholen, phir "Add to Home Screen" kar den. iPhone ki home screen par poora app icon ban jayega, full-screen chalega, aur har dafa wahi dashboard khulega — bilkul native app ki tarah. Is ke liye engine ek computer (Windows/Mac/Linux) par chalana hota hai, kyunki wahi Binance data fetch karta hai aur paper-trades calculate karta hai. Teen raste hain:

Route A — Same Wi-Fi (sab se aasan, 10 minute)

Computer par engine chala kar iPhone se uske Wi-Fi par access karna. Dono devices ek hi network par hone chahiyen (ghar ka router). Computer band hoga to iPhone par app data update nahi hoga — engine ka chalna zaroori hai.

Step 1. Computer par Node.js 20+ install karen (nodejs.org se) — ya Bun (bun.sh).

Step 2. Repo download karen (ZIP ya git clone) aur project folder me jayen.

Step 3. Script chalayen — Mac/Linux: **deploy/start-local-mac-linux.sh**, Windows: **deploy/start-local-windows.bat**. Ye pehli dafa dependencies install karta hai (5–10 min), phir engine + web app + gateway start karta hai.

Step 4. Script aakhri me ek address print karega: **Phone (same WiFi): http://192.168.x.x:81** — ye computer ka LAN IP hai. Isay likh len.

Step 5. iPhone par Safari kholen, wo address type karen (jaise http://192.168.1.10:81) aur load hone den. Login me invite code **M2991474** daalen.

Step 6. Safari me neeche **Share** button (square + arrow), phir **"Add to Home Screen"** tap karen, naam rakh khen "AI Trading Lab", **Add** dabayen. Bas — home screen par app icon ban gaya.

Route B — Public Link via Cloudflare Tunnel (kisi bhi network par)

Agar aap chahte hain ke iPhone ghar ke Wi-Fi ke baghair bhi (mobile data par) app khol sake, to computer par ek tunnel chala kar public HTTPS link bana sakte hain. Cloudflare ka free **cloudflared** tool best hai — koi account billing nahi, sirf ek free Cloudflare account. Ngrok bhi chalega (ngrok.com, free tier).

```
# cloudflared install karo (brew install cloudflared / winget install
Cloudflare.cloudflared) cloudflared tunnel --url http://localhost:81 # output me ye
jaisa URL milega: # https://random-words-1234.trycloudflare.com # wahi URL iPhone
Safari me kholo → Share → Add to Home Screen
```

HTTPS link hone ka faida: Safari isay proper "secure" treat karta hai aur PWA install bhi zyada reliable hota hai. Tunnel tab tak zinda rehta hai jab tak computer par cloudflared chal raha hai. URL har restart par naya banta hai (quick tunnel), is liye agar link badal jaye to sirf home-screen shortcut dobara bana len, ya paid named tunnel use karen jo fixed URL deta hai.

Route C — Native iOS App (Mac + Xcode, advanced)

Repo ke andar **ios-app/** folder me Capacitor project para hai jo native iOS app ban jata hai (Xcode project, AppIcon aur Splash ke sath). Is ke liye Mac computer aur Apple ID chahiye: **bun install** chalayen, phir **npx cap open ios** se Xcode me project kholen, apna Apple ID signing team select karen aur iPhone ko cable se laga kar Run dabayen. Free Apple account se 7 din ke liye app sign hoti hai; paid developer account ($99/saal) se 1 saal. Ye rasta tabhi len jab native icon + offline shell chahiye — rozana use ke liye Route A/B kaafi hai.

5. v4.4.0 Me Naya Kya Hai (Quick Tour)

Is version me aapki 5 requests poori hui hain. Pehli: Shaakuni Trap Trader ke indicators ab chart par live dikhte hain — PDH/PDL/PWH/PWL liquidity levels, premium/discount EQ line, FVG zones aur Order Block boxes canvas overlay par bante hain, aur neeche indicator strip me RSI, EMA200, ATR, VWAP, ADX, Supertrend direction aur killzone status chalti hai. Doosri: uski 5 strategies (SSM Sniper Bull/Bear, Killzone Sweep, OB Retest Continuation, Discount+EMA200) auto-active hain. Teesri: purani PDF Strategy Pack S1–S9 wapas aa gayi hai — 15m timeframe par saare coins par chalti hai. Chauthi: halal/haram filter hata kar saare Binance spot coins (300+) universe me aa gaye, volume-ranked: 1–10 MAJOR, 11–60 RETAIL, baqi ALTCOIN. Panchvi: trades pehle se 50 guna zyada aa rahi hain kyunki 1m + 15m dono scan layers hain.

AI ke liye naya **AI TRAINER** card Home par hai: wo Binance ka historical data (1d 2017 se aaj tak; 2006–2016 ka crypto exchange candle data exist nahi karta is liye 2017 se start hai) par walk-forward backtest chalata hai — fees aur slippage included, IS/OOS 70/30 split, Profit-Factor se weights. OOS me jo strategy fail ho wo khud pause ho jati hai. Har 25 closed trades par live results se dobara weighting hoti hai (self-learning). Risk har trade

par flat **1%** hai; 25 trades ke baad consensus win-rate par scale hota hai (cap 2x). Fee-edge guard chhote TP moves (fees+slippage se kam) walon ko skip karta hai — yehi loss killers hain.

6. Troubleshooting

Masla	Hal
APK install nahi ho rahi ("app not installed")	Purana alag-signed AI Trading Lab app uninstall karen, phir dobara install. Ya Settings > Security me "Install unknown apps" (Chrome ke liye) on check karen.
Invite code reject ho raha hai	M2991474 (capital M, koi space nahi). Code Db v9 me seeded hai; agar phir bhi issue ho to app data clear kar ke dobara login karen.
iPhone Safari se page nahi khul raha	Dono devices same Wi-Fi par hon, computer par script chal rahi ho, aur address me computer ka SAHI LAN IP likha ho (port 81). Computer firewall me port 81 allow karen.
PWA icon par 'connection refused'	Computer band ya script ruk gayi hai — usay dobara start karen. Tunnel route me cloudflared chal raha hai check karen; quick tunnel URL har start par badalta hai.
Chart par data nahi aa raha / candles purani	Binance API access check karen (kuch countries me block hota hai). App internet ke baghair candles nahi la sakta; Wi-Fi/mobile data on karen ya tunnel route use karen.
Trades ab bhi kam lag rahe hain	Home par "Why no trades?" report card dekhen — FEE_EDGE_SKIP count bhi wahan aata hai. 15m scan layer poore universe ka cycle ~2 minute me complete karta hai; thora intezar karen ya TRAIN AI chala kar dekhen.

Table 3 — Aam masail aur unka hal

7. PAPER ONLY — Hamesha Yaad Rakhen

AI Trading Lab ka maqsad seekhna aur strategy testing hai, real trading nahi. Engine me aisa koi code path nahi jo exchange par order bhej sakta ho — na Binance API keys trading ke liye use hoti hain, na koi withdrawal ya transfer ka rasta hai. AI weights, risk 1% rule aur fee-edge guard sab paper results par kaam karte hain. Real market me ye numbers guarantee nahi hote, is liye in results ko financial advice na samjhen. Jab tak aap khud explicitly koi bridge (jaise MT5 bridge, jo owner-gated hai) on na karen, system hamesha paper mode me rahega.

Koi masla ho to GitHub repo ke issues ya mujh se seedha poochh len. Next version me chah ho — aur indicators, aur strategies, ya iOS ka native TestFlight build — to bas bata dena, main add kar doonga.
